

321 eConference is a partnership between the IDSC, IMDSA and 321 eLearning.

The 2nd annual 321 eConference was held in March 2015. It was scheduled to align with World Down Syndrome Day and it provided an opportunity for families, educators, and researchers from around the world to connect, share, and learn about Down syndrome.

Sessions were held over a 3 day period and consisted of sessions in both English and Spanish. There were 63 sessions presented over the eConference weekend.

The 321 eConference provides families within the Down syndrome community the opportunity to learn about various issues, concerns and aspects about Down syndrome from the comfort of their own home. These sessions (and the recordings available after the event) are invaluable to the families that had a desire to learn more about such topics as sleep issues, behaviors, assistive technology, early intervention and dementia, to name a few.
